

We live in a cottage too shaded by neighbors' trees to install solar collectors on our roof. CT needs shared solar legislation like MA and other states to allow neighbors to share costs and benefits from solar installations.

The 2 bills introduced this year about a Shared Solar program (House Bill 5427 and Senate Bill 334) do not fix the problem, they only tweak the unnecessary pilot. The pilot program has no purpose; we need an actual shared solar bill.
